Summary

Data scientist with an M.Sc. in Electrical Engineering, combining scientific ML research with operational model deployment. Experience in multimodal AI, statistical model comparison, interpretability and Python-based ML workflows, translating analytical findings into measurable business outcomes.

Research Experience

Computational Intelligence Laboratory — Research Engineer | 2023 – 2025

- Prototyped multimodal vision–language architectures for radiology report generation and brain tumor detection; fine-tuned LLMs and multimodal LLMs using multisequence MRI and clinical text.

Professional Experience

Vida Cámara — Data Scientist | June 2026 – Present

- Analyzed churn patterns and reasons for individual policyholder attrition. Partnered with Customer Experience on proactive and reactive interventions, contributing jointly to a **5 percentage point increase in retention** versus the same period last year.
- Develop policyholder segmentation and personalized communications to direct demand toward a healthcare center; analyze campaign outcomes by stratum and refine subsequent campaigns through iterative feedback.
- Develop future healthcare expenditure models and analyze service sequences to identify high-cost policyholders and trends; investigate causal relationships associated with general medicine consultations.

eRuido — Data Scientist | 2024 – May 2026

- Automated acoustic event pre-labeling across **10 on-premise stations**, with human validation for operational reporting, reducing annotation time from days to seconds.
- Designed station-level experiments comparing models, features and thresholds under different operating conditions, achieving approximately **80% precision per station**.

Selected Personal Project

Industrial Visual Anomaly Detection | GitHub repository

- Built a defect localization pipeline using frozen DINOv2 embeddings and k-NN over normal patch representations, without defect examples for training; evaluated on 1,258 MVTec AD images across 15 categories, reporting **AU-PRO 0.831** and recall 0.795.
- Implemented ONNX inference, a FastAPI service and Docker deployment configuration with Prometheus/Grafana monitoring; included unit and integration tests and GitHub Actions CI.

Education

M.Sc. in Electrical Engineering, Universidad de Chile | March 2024 – March 2026

Bachelor in Electrical Engineering, Universidad de Chile | 2019 – March 2026

Technical Skills

ML & statistics: scikit-learn, PyTorch, TensorFlow, SHAP, Optuna, Lifelines; statistical testing, survival analysis, model evaluation and LLM fine-tuning.

Development & data: Python, SQL, Pandas, BigQuery, FastAPI, Docker, GitHub Actions.

ML operations & cloud: MLflow, Evidently AI, Airflow, GCP.

Languages

Spanish: native | English: B2 (TOEFL ITP)
